ITSLEARNING + CLOUD INTEGRATIONS = ♥
Cloud Integrations

Office 365 <-> itsLearning <-> G Suite
Editing, Sharing, Collaborating and Commenting with the Cloud

- Microsoft Office Cloud tools are now built into itslearning
- There is no need to create accounts or set-up integrations
- This is rolling out now for pilot customers and will be available to all later in 2017
Add element to folder - Link_tests

Resources:
- **Folder**: Organise content to create a tidy course structure.
- **Excel**: Create new Excel document.
- **File**: Upload files from your computer.
- **Note**: Create notes for simple texts or information.
- **File or folder**: Upload files or folders from your computer.
- **Link**: Add links to your course or share them in the library.
- **Page**: Create pages with rich-text and interactive content.
- **Picture with description**: Upload a picture; add a title and a few lines to describe it.
- **SCORM or AICC link**: Add links to external SCORM or AICC content.
- **PowerPoint**: Create new PowerPoint presentation.
- **Word**: Create new Word document.

Activities:
- **Assignment**: Let participants submit answers individually or in groups.
- **Custom activity**: Assess activities that are performed outside itslearning – such as lab activities and ‘show and tell’ evaluations.
- **Discussion**: Create a written, structured debate.
- **LTI tool**: Select tools that use the IMS Learning Interoperability standard (LTI).
- **Registration**: Create events to which users can register.
- **Survey**: Collect information from a group of respondents.

2. Cloud Integration Today
Add files from Google or Office 365 into courses, plans, assignments, and the library.
3. Google and Office 365 Integration in itslearning

Spring/Summer 2017
Cloud Integration

We want our users to work with files/applications from the major cloud service providers as transparently and efficiently as possible within itslearning. Where possible we will hide the complexities of integration. Customers can select which cloud services should be used for advanced features/integration, but we will always allow users to work with the major cloud services.”

New task

- **Description:**
  
  Give your task a short description e.g. “Read page 12 - 30 in the history textbook.”

- **Type:**
  - Homework
  - In class

- **Due Date:**
  - Thursday 10.11.16
  - 09:00
  - Change

- **Show more**
New task

Read page 23-31 in the textbook and study the weather model in the pdf file I have attached.

Add files
or simply drop them here

Collaborate with Google Docs

Homework  In class

Complete before:
Thursday 10.11.16 09:00

Assessment scale
No assessment
Read page 23-31 in the textbook and study the weather model in the PDF file I have attached.
Select the file you want to link to

Google Docs

- How to set up a budget
- Monthly budget example
Summary: Task and Cloud Services

- Supports assignments, in class work, and notifies student
- Teachers can quickly add tasks and see at a glance who has completed them
- Easily add files from Google, O365, itslearning and elsewhere
- Create collaborative tasks using Google or Office 365
- Tasks will appear in the new itslearning mobile app
Cloud Integration
Assignments
Write an essay on Shakespeare

An essay is an argument. The introductory paragraph presents the thesis that you will...
1. Automatically we create a copy of the assignment so we have a statement of record.
Teacher can view the submission and add **in-line** comments and edits.
Students can see the teacher comments and their grade.
If the teacher allows the student can re-submit and we take another copy for annotating.
Assignment and Cloud Services

• Students can work in their favourite cloud provider

• itslearning will retain a permanent copy of cloud-based assignment submissions

• Teachers use the same built-in annotation tool for submission from either Cloud services

  • E.g. Google doc, MS Word, Google Sheets, MS Excel, etc.
Other great cloud features for spring/summer

• Cloud file linking/uploading through all courses, library, and planners
• Log on to the Cloud service once and we will remember the connection
• Faster enterprise integrations with Azure as we join the Microsoft Azure Marketplace
