“Another important indicator in choosing itslearning was the rate of response and availability of their staff. We looked at many LMS companies, local and international, and itslearning was by far the most responsive.”

“Ours main objective when migrating from Fronter to a new learning management system was to find a platform that was more flexible and had a simpler user interface. With itslearning, we love the modern design as well as flexibility to customise the platform. We have been able to create a tailored look that reflects the ethos of OIS — something that not all platforms were able to provide.”

“One of the biggest upgrades we’ve seen in migrating to itslearning has been the improved triangular communication between the teachers, students and parents. We expect that our teachers will have a lower workload because of this.”

“itslearning has also listened to our suggestions for timing the transition, mapping out 6 months in advance — which we feel is sufficient time for us and our teachers to learn the platform and begin planning their lessons in itslearning for the coming year. This timeline has been one of the key contributors in diminishing the stress that comes with this kind of transition. We have included teachers in project groups throughout this process, and they have been advising us each step of the way. They feel very confident in the decision to choose itslearning because of the company’s pedagogic competency, rather than just having a sales mentality. We are very pleased with the training sessions we have received so far and look forward to fully implementing itslearning for the coming school year.”
