

## LMS implementation is hard. We make it easy.

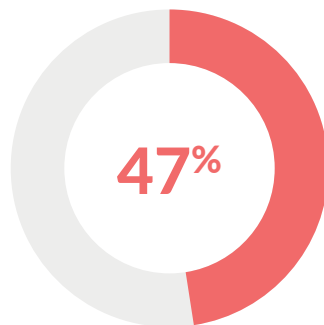

Rolling out a learning management system to enable digital teaching and learning involves many different steps. Schools have to integrate the LMS with their existing software, migrate content, and train staff. Without the right partner, these tasks can be formidable.

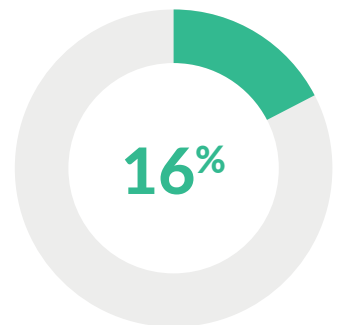

Overall, organisations waste **\$122 million** for every **\$1 billion** invested in IT projects as a result of poor implementation. The numbers are overwhelming:

Projects are completed late

Run over budget

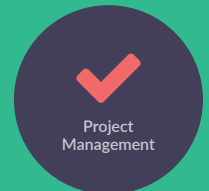

Are considered a failure <sup>1</sup>

### Implementing an LMS is no different

More than 50 percent of LMS projects either fail or cost much more than originally planned because the right people were not in place to oversee the implementation process.<sup>2</sup>

**You need an experienced team to lead you through this process successfully.**  
Let itslearning be your guide. We can help you navigate the three keys to effective LMS implementation

Project Management

Change Management

Pedagogical Transformation

**Schools that have partnered with us on their LMS implementation have experienced a user adoption rate approaching 90%**

### We have successfully guided all types of schools through this process.

Whether you have 200 students or 200,000 students, we can customise a solution and process that best meets your needs. itslearning also provides a library with over two million vetted, standards-aligned learning objects through a unique partnership with Gooru.

Having course content ready to go on day one shortens implementation time and further increases your chances of success.
