

Open Educational Resources (OER)

Open Educational Resources Play an Increasingly Vital Role in Education

As universities and teachers move more toward digital curriculum, OER becomes an attractive alternative to paid content.

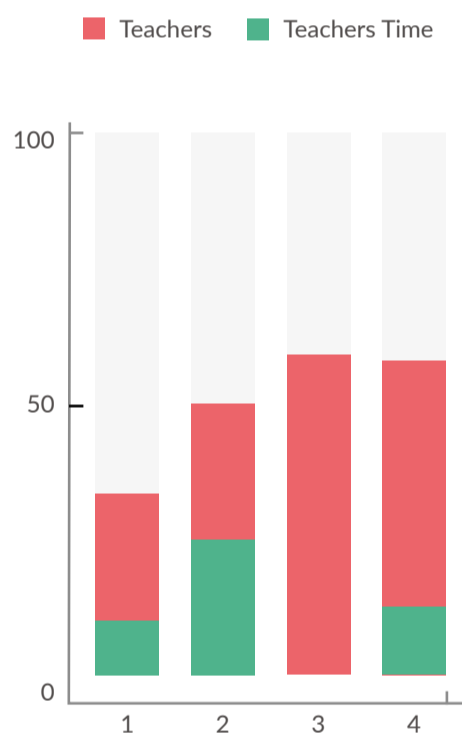

OER marketplaces (e.g., Gooru, Top Hat) that focus on OER content continue to expand.

Organisations that provide full OER-based curricula are beginning to hit their stride (e.g., EngageNY, Open Up).

<https://thejournal.com/articles/2017/04/03/4-trends.aspx>

OER isn't always easy to select, manage, or organise...

- 1 One-third of teachers spend up to 10% of their working week building digital curriculum
- 2 50% of teachers are using digital curriculum and content 25% to 50% of the time
- 3 59% of teachers complain of too many systems to interact with
- 4 58% of teachers spend up to five hours a week just on web searching for resources, approximately 12.5% of work time is consumed in web searching

When implementing and utilising OER through the itslearning LMS, universities can:

Increase teacher efficiency and effectiveness

Save money

Improve safety and security

Empower students and teachers

By streamlining curriculum and adding more than 1.7 million vetted OER searchable by topics and standards, itslearning is helping universities improve learning without the need for additional resources, money, or manpower.
