

How to download my files from Fronter as a student

This explainer describes how a student can download personal files from different areas in Fronter.

Download files from *My documents*

1. Go to *My documents* in the top menu. This layout can be different depending on your school's settings.

2. Check the box for the files you want to download and then choose *Download*. If you have folders with content, you will have to open the folders and download from there.

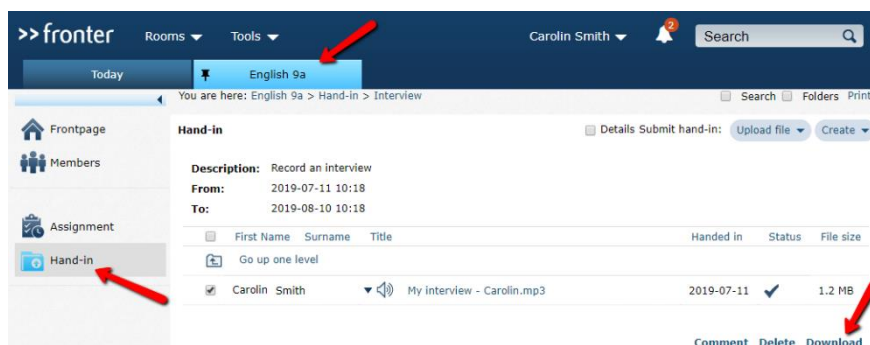

3. Your files will be zipped into one file and you will be notified when the download is complete.

4. The file will be downloaded to your computer, typically in a folder named *Downloads* or similar. From here you can unzip the file. Check your device manual on how to do this.

Download files from a hand in folder

1. Go to the Room and choose the hand in folder you want to download from. Check the document or documents you want to download. If you choose more than one file, they will be zipped in to one single file, see above.

Note: If you have uploaded files to other folders, you can download those in the same way as from a hand in folder.

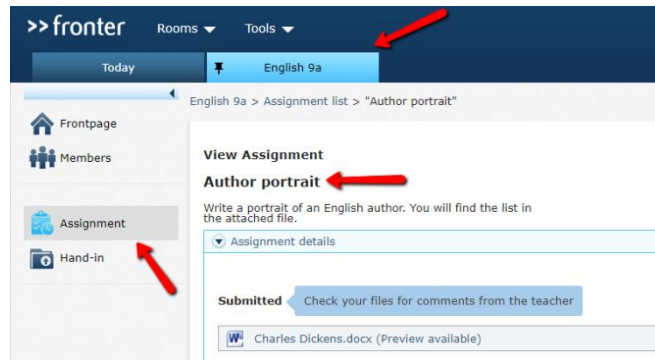

Download files from an assignment

1. Go to the Room and choose the assignment you want to download.

In this example:

Room - *English 9a*

Assignment - *Author portrait*

2. Click on your submitted file and the file will be downloaded to your device. If the file is an office file, a preview of the document will open in a new tab.
To download the file, choose *Open original file*.
