

its Learning

AT THE HEART OF EDUCATION

Additional Services

Add even more value to the best learning platform.

Management Information System (MIS) integration

All from a single platform.

Save hours of administration time by feeding your users and groups automatically. By integrating itslearning with your MIS system, the users and groups will be automatically provisioned on to the system and updated daily.

The MIS extraction is remotely set up and the data is sent along a secure connection to our servers where it is processed and uploaded into itslearning.

We integrate with a range of MIS providers:

Further Education/ Higher Education

- EBS
- Maytas
- Pro Solutions
- UNIT-e

Primary/Secondary

- Arbor
- Bromcom
- Double First Engage
- Facility CMIS
- iSAMS
- Progresso
- Pupil Asset
- RM Integris
- ScholarPack
- SchoolPod
- SIMS
- Teacher Centre
- WCBS

REQUIREMENTS

Reconfigure network firewall.
Create a user account in the MIS.

TIME

1 week for implementation.*

PROCESS

Once reconfiguration is complete, the MIS user account is created.

The setup includes creation of access credentials.

MIS software is installed on the server and tested.

Accounts created and updated by itslearning.

* FE/HE implementation time scales will vary based upon requirements.

Single Sign-On (SSO)

Making your life easier.

When you are connected to your establishment's network, you can seamlessly log into the platform.

You also have the option to use ADFS, OAuth or Azure for our SSO system if you require users to login with the same credentials.

We also provide SSO services for cloud networks such as Google Classroom, O365 and the LGfL.

REQUIREMENTS

A commercial SSL certificate that allows two machines to communicate through a secure channel.

A physical or virtual machine for the domain controller.

A second machine running the ADFS¹ service and IIS.

We use the username that exists within a user defined field in the MIS system.

¹ Setup dependant on ADFS version being used i.e. 2.* or 3.0

TIME

2 weeks for testing.

1 week for production.

PROCESS

Your establishment configures the two machines on their network.

itslearning configures your site ready for ADFS in the QA environment and performs testing before moving the configuration to the production environment.

Your establishment and itslearning then reconfigure ADFS to work in the production environment.

Office Outlook or Google Mail integration

A combination of tools at your finger tips.

By integrating Office Outlook or Gmail, your users have immediate access to their emails via the platform.

We configure Office Outlook or Gmail to facilitate the creation of new email addresses or support existing email addresses.

REQUIREMENTS

Adding and validating a customer specified domain name for Office Outlook or Gmail.

Adding required DNS records to the new domain.

TIME

1 week for implementation.

PROCESS

Your establishment configures the DNS records.

itslearning manages all implementation from here.

Plagiarism Tool

Keeping a watch on the students' work.

This practical tool allows teachers to certify the authenticity of content. It automatically checks texts against the internet, archives, databases and other students' work.

The plagiarism tool detection is built into the online assignment workflow, making it simple for teachers to use.

The tool instantly reduces valuable time spent verifying students content. If similarities are detected, the tool flags it for plagiarism and the results are visible for the teacher to examine.

REQUIREMENTS

When you're ready, we activate this for you.

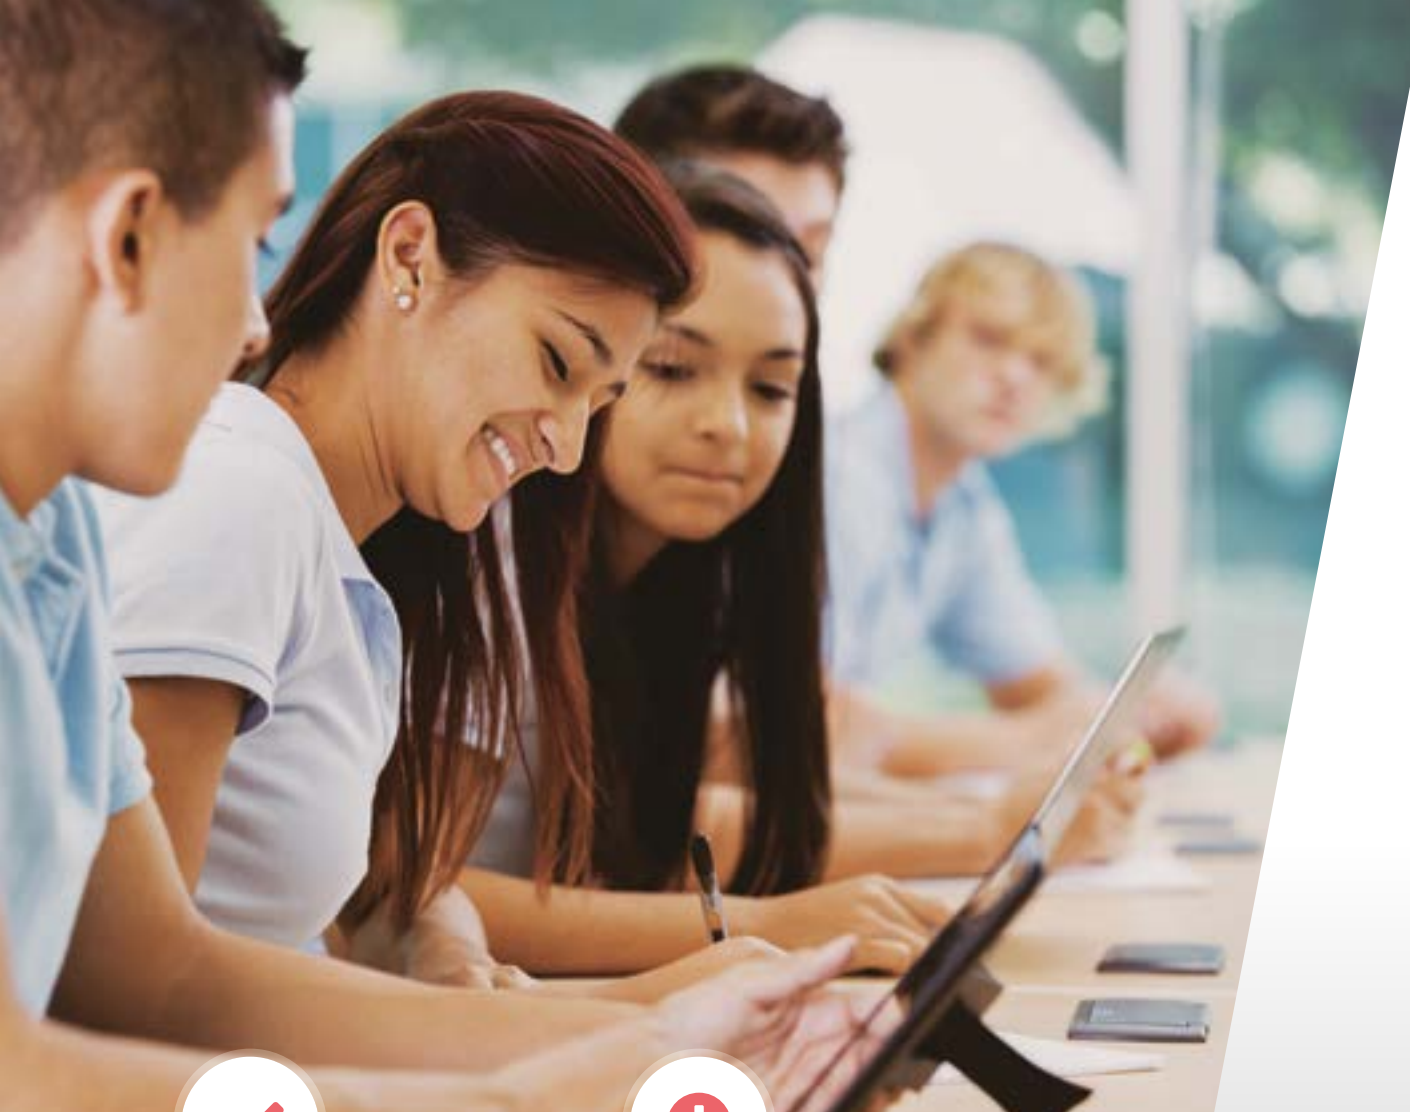

TIME

1 week for implementation.

PROCESS

itslearning manages the entire implementation.

Test Mode Browser (TMB)

Restricts access during exams and tests.

We've created a special browser that prevents users from running any other program on their computer during tests. This includes restrictions to any web page, content within itslearning and access to local files.

When TMB is activated, the test will start in a new window, locking down all access to everything else. It is not possible to change to another window until the test is completed and the TMB is disabled by the teacher.

REQUIREMENTS

When you're ready, we activate this for you.

TIME

1 week for implementation.

PROCESS

itslearning manages the entire implementation.

Advanced Reporting & OData

A valuable insight of your establishment's progress.

In addition to the standard reports within itslearning, we also offer a range of detailed reporting options using the data warehouse.

Advanced Reporting - Built-in and customisable reports, generally on administrator level.

OData - Raw data from platform fed into your business analytics solution. Allows aggregating itslearning data alongside other data from your establishment if desired, to create comprehensive bespoke overviews for education/business perspectives.

14 Advanced reports available. These include:

- Learning objectives alignment report
- Learning objective progress report
- Learning objectives progress report gradebook view
- User status daily overview
- Gradebook and outcomes
- User course enrolment
- Login and session details
- Course visits
- Course Content (Elements) report

TIME

Agreed between your establishment and itslearning.

PROCESS

We create bespoke solutions to ensure you get the right reporting requirement. Get in touch and we will discuss the process and implementation for you.

Text to Speech (TTS)

Recording text out loud.

Ideal for supporting early learners, those with learning difficulties and students whose first language is not English.

This feature supports TTS on content created in itslearning as well as common file types readily available. It comes with a range of setting preferences, including voices, speed, colour and a highlighting tool.

REQUIREMENTS

When you're ready, we activate this for you.

TIME

1 week for implementation.

PROCESS

itslearning manages the entire implementation.

About itslearning

itslearning is a cutting edge digital classroom, where teaching and learning is transformed to deliver outstanding results. It is a learning platform that connects the whole school community anywhere at anytime on any device. This intuitive cloud-based Learning Platform integrates with O365 and Google Classroom. It promotes collaboration and strengthens communication between users to help shape, support and manage a more personalised learning environment.

Founded by university students in 1999, its headquarters is located in Bergen, Norway. Serving over 7 million worldwide users and generating cost savings year on year. itslearning is a safe and secure platform which guarantees uptime availability of 99.9%.

itslearning - at the heart of education.
