Teaching has gotten harder! Is your district keeping up?

Keeping up with technology, standards, and testing means teachers are being asked to manage more, but with fewer resources:

- 59% of teachers complain of too many systems to interact with.
- 58% of teachers spend up to FIVE HOURS a week just on web searching for resources.
- 51% of SCHOOLS have teachers that spend 5 to 9 hours a week on curriculum and grading vs teaching.

This leads to high teacher turnover:

- 15% of all teachers leave the profession after the first year and more than 50% leave within the first five years.

To overcome these challenges, districts must become more efficient:

- 53% of districts have less than 50% LMS adoption.

"The goal needs to shift from one of making a system that teaches children a curriculum more efficiently to one of making the system more effective by inspiring lifelong learning in students."

Steve Denning, Forbes.com

But what if you could easily solve these challenges?

An end-to-end Learning Management System (LMS) that consolidates curriculum guides, instructional frameworks, professional development, and other critical resources and allows teachers to do what they do best: focus on student achievement, while providing:

- 1 district-wide, end-to-end digital platform that requires a 1 login.
- MORE TIME spent on instruction for teachers vs. curriculum and lesson planning.
- 80-98% user adoption.

Join other districts such as Houston ISD (TX), Harford (MD), Bartholomew CSD (IN) and Forsyth (GA) that have become more efficient with itslearning.
