its learning

AT THE HEART OF EDUCATION

itslearning loves Google!

Google Classroom and G-Suite allow teachers to easily assign and collect digital work. With One Login, our seamless integration makes it easy for teachers to get more out of Google by having all the benefits of the robust and easy to use itslearning LMS. itslearning saves teachers time by providing single access to the tools they need, including standards-aligned digital resources.

"Our teachers wanted to know that they could have the same experience as simply using Google Docs and pull it into the LMS so students could easily access the content."

Tim Wilhelmus,
EVSC innovation, curriculum, and technology specialist

The integration between the itslearning LMS and Google, creates a powerful ecosystem to support teachers.

"Our teachers wanted to know that they could have the same experience as simply using Google Docs," says Tim Wilhelmus, Evansville Vanderburgh School Corporation's (EVSC) innovation, curriculum, and technology specialist, "and pull it into the LMS so students could easily access the content." This integration allows EVSC's teachers and students to fully leverage Google's collaborative atmosphere. For example, instructors can create an activity based on a Google slide deck, and then ask students to contribute to that slide show.

"That can all happen right inside of our LMS," says Wilhelmus. "This is useful because it doesn't require teachers to send their pupils out to a different digital space. And it's important because students are more likely to be successful if they're working intuitively in a space that they're comfortable in, and not having to figure it all out."

One Login for itslearning and Google

As G-Suite helps to make classroom workflows easier, by adding itslearning you also gain standards-aligned content, robust assessment tools, and instant access to data that simplifies teaching and enhances learning.

PLAN:

- **Use Your Existing G-Suite Content** – Import your own content seamlessly, to create assignments from your Google Drive such as Docs, Forms, Sheets, Slides and more!

- **Search for Content** – The itslearning library includes millions of high quality resources. Teacher-created, district-created, free or subscribed content can be easily accessed and incorporated with your preexisting Docs, Forms, Sheets, or Slides.

- **Create a Class Plan** – Organize and align learning resources to standards, to create playlists and pathways for students and adding depth to your plans.

ENGAGE:

- **Engage students with Content, Assignments, and Activities** – Using one login, move students from consumers to creators by integrating Google's collaborative nature and your content within itslearning.

- **Support Solid Collaboration** – Through the itslearning Google integration, teachers can create collaborative assignments for all course participants, groups of students or individuals.

- **Use any device** – No matter where you are or what device you use, itslearning connects you with digital tools and materials for teaching and learning.

ASSESS:

- **Create Assignments with G-Suite** – Easily incorporate your Google content and assign it to students. Our tools provide automated grading to easily assess student understanding.

- **Align Assessments to Standards** - Create assignments with standards-aligned rubrics, and give students concrete, actionable feedback via text, audio, or video. Teachers can view student progress in real-time and help pupils reach their maximum potential.

- **Easily Communicate** – The itslearning LMS provides surveys, discussions, live conferences, messaging, and more allowing teachers to communicate and assess students in a variety of ways.

REPORT:

- **Know where Students Stand** – By tracking student mastery of standards, teachers gain valuable insights into student progress, quickly identifying and assigning appropriate content personalized for each student's needs.

- **Trends and Progress** – Through the incorporation of G-Suite content and our robust reporting functionality, teachers can look beyond the grade book and track growth or detect anomalies over time.

- **Advanced Reporting Functionality** – Keep administrators in the know by drilling down to view data by school, grade, class, and more.

---

itslearning further simplifies teaching through:

- **Library** – Access, filter, and share publisher-created, teacher-created, district-created, or open educational resources.

- **Recommendation Engine** – Offer customized resources for remediation or the acceleration of learning.

- **Rubrics** – Make grading easy and provide students with a baseline.

- **Assessments** – Create tests and quizzes with robust question types.

- **Grade Book** – Track student performance and mastery of standards.

- **Parent Portal** – Get parents involved, keep students on track, and support family engagement.
